

BILL DAVIS STABLE

April 6, 2005

Dear Mr. Kinasewich,

Our horses have been on the Oxygen Diffusion system for three weeks, and we have noticed results within the first week. I won seven out of nine races the first week that they were drinking the water.

I have noticed that all my horses are drinking up to two - three times the amount of water compared to normal tap water. They have stopped getting dehydrated because they are drinking more of the oxygenated water which in turn is hydrating them.

The horses aren't tying up anymore because there is more oxygen in their system.

All my horses have started shedding out and we are noticing their dapples coming out with an added shine within their coats.

Regards,

Bill Davis
